ISO Duties at Defensive Fire Incidents

FreEngineering Safety Officer

Standard References NFPA 1521; 6.2, 6.3

Instructors should always include department references and procedures in this and any training session.

Exterior Operation Duties

<u>Background:</u> At defensive fires, the safety officer plays a significant role in protecting members operating. In conjunction with the IC, Division, Group and Company Officers, many injuries and fatalities can be avoided by enforcing specific safety procedures. Fire ground officers know the importance of collapse zones however, many other incident hazards exist beyond that basic duty. Review these factors and hazards that occur during defensive fires and discuss roles and responsibilities of the ISO.

Collapse Danger Zones	Fire Scene Hazards	Specific Scene Hazards	Long Term Factors
-1 ½ times height	-Smoke and heat	-Fire spread potential	-Rehab
-Identification and	 Obscured visibility 	-Explosion	-Lighting
establishment of the	-Crew assignments	-Contaminated runoff	-Crew rotation and
zones	-Incident Action Plan in		replacement
	place and communicated		·
Fire Streams	Water Supply	Traffic	Environmental
 -Loading on building 	-Adequate	-Apparatus traffic	Hazards
-Streams knocking over	-Uninterrupted	-Local area traffic	-Heat
structure	-Alternates available	-Other agency equipment	-Cold
-Water rebounding		-Egress for all	-Wind
-		-Staging area	-Storms
		management	-Weather changes
Overhauling	Exposure Protection	RIT Usage	Investigation
-After knockdown safety	-Entry of exposures or	-In place and ready to	-Entry permissions
-Levels of entry	stream protection	deploy	-Stability of structure
necessary	-All interior safeties	-Keep from task level	-Off limit areas
	apply to exposure	assignments	-Security of scene
	protection	-Rotate	

Discussion

How would you prioritize these factors at a fire scene?

How do you accomplish each of these factors and assignments?

How do you monitor these factors and assignments?

Assuming these fires are now being fought defensively, which safety officer defensive duties would need to be performed? Are there specific hazards you can identify here?
